Course Introduction

Most organizations have accident investigation procedures. However, these procedures are often based on a blame culture & do not inspire the investigator to find & correct the defects in the management system (root causes) that allowed the hazards to exist & the accident to occur.

Several industries have adopted excellent accident investigation & analysis techniques. Competence in the application of modern accident/incident investigation tools will assist organizations to learn & to prevent the recurrence of accidents & to evaluate the extent & location of management defects (root-causes), which contributed to the accident event. A good analytical accident investigation is invaluable to achieve continuous improvement in an organization's HSE performance.

Course Objectives

- ▶ Define the accident / incident event
- ▶ Understand modern accident causation theories
- ▶ Define all accident investigation and analysis stages
- ▶ Carry out Initial actions in response to accident and incidents
- ▶ Gather evidence and data relevant to the accident investigation
- ▶ Interview witnesses
- ▶ Analyze the role of human factors involvement in accident investigation
- ▶ Compile accident reports and remedial action plans
- ▶ Gain familiarity with modern accident analysis techniques
- ▶ The use of accident investigations as a management audit tool
- ▶ To locate and define active human error, preconditions and root causes
- ▶ Report writing and compilation

Training Methodology

The workshop is designed as a highly interactive & engrossing session comprising :

- ▶ video-based case studies
- ▶ syndicate exercises
- ▶ role plays
- ▶ group discussions
- ▶ power point presentations

Specially Designed for

This workshop is intended for all staff roles in engineering, technical and supporting departments with responsibility for ensuring safety in the workplace and for conducting, leading, reviewing and approving incident investigations.
